

PERSPECTIVES Author Instructions

OF THE ASHA SPECIAL INTEREST GROUPS

Perspectives of the ASHA Special Interest Groups, an online-only, international, peer-reviewed scholarly review journal—has been published since 1991.

Online ISSN: 2381-473X

History

Perspectives of the ASHA Special Interest Groups is the online, peer-reviewed scholarly review journal of the American Speech-Language-Hearing Association's Special Interest Groups (SIGs). Each SIG began publishing a newsletter for its affiliates in 1991. From 1991 through 2015, each SIG published under its own *Perspectives* title. In 2016, the separate *Perspectives* publications were consolidated into *Perspectives of the ASHA Special Interest Groups*, and the old publications were archived. *Perspectives* is now formally recognized as being peer reviewed. This change was made effective January 1, 2017, though it should be noted that many articles published prior to that date did undergo peer review.

Purpose

Perspectives of the ASHA Special Interest Groups is a scholarly review journal focused on bridging the gap from research to practice and advancing knowledge translation in the field. Each of ASHA's 20 SIGs provide content for an issue of *Perspectives*. Please see the list of SIGs and their editors-in-chief below.

Editor-in-Chief Monique Mills, PhD	Editor-in-Chief Kendrea L. Garand, PhD	Editor-in-Chief Dawn Konrad-Martin, PhD	Editor-in-Chief Celeste Domsch, PhD
SIG 1: Language Learning and Education	SIG 2: Neurogenic Communication Disorders	SIG 6: Hearing and Balance Sciences: Research and Clinical Applications	SIG 10: Issues in Higher Education
SIG 4: Fluency and Fluency Disorders	SIG 3: Voice and Upper Airway Disorders	SIG 7: Auditory Rehabilitation	SIG 11: Administration and Supervision
SIG 5: Craniofacial and Velopharyngeal Disorders	SIG 13: Swallowing and Swallowing Disorders (Dysphagia)	SIG 8: Public Health Audiology	SIG 14: Cultural and Linguistic Diversity
SIG 12: Augmentative and Alternative Communication	SIG 15: Gerontology	SIG 9: Pediatric Hearing and Hearing Disorders	SIG 17: Global Issues in Communication Sciences and Related Disorders
SIG 16: School-Based Issues	SIG 19: Speech Science		SIG 18: Telepractice
			SIG 20: Counseling

Publication Frequency

Perspectives is continuously published, with articles added to their respective issues as they complete production.

Manuscript Types

Perspectives publishes a wide variety of article types:

Research Article

A research article is a full-length article presenting important new research results. Research articles include an abstract, introduction, methods and results sections, discussion, and relevant citations. Suggested maximum length: 40 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Research Note

A research note is a brief manuscript presenting pilot, preliminary, and/or exploratory findings or a new method for the collection or analysis of data. Includes a short abstract and introductory paragraph. The scientific findings should be explained and documented concisely. Suggested maximum length: 20 manuscript pages including citations, tables, and figures).

Review Article

"Review Article" is an umbrella term covering systematic reviews (with or without meta-analyses), historical reviews of a body of research, description of an author's programmatic research, and possibly other types of reviews. Reviews can be a comprehensive overview, or they can be focused on a narrow body of research. Reviews should be accessible to knowledgeable readers not expert in the subject area. They should be prepared with the same rigor as a research article reporting specific results. Suggested maximum length: 40 manuscript pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Clinical Focus

A clinical focus is an article that may be of primary clinical interest but may not have a traditional research format. Case studies, descriptions of clinical programs, and innovative clinical services and activities are among the possibilities. Suggested maximum length: 40 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Tutorial

A tutorial is an educational exposition covering recent literature on topics of interest to clinicians and other scholars. Suggested maximum length: 40 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Technical Report

A technical report is a brief article describing a pretrial feasibility or pilot efficacy study that addresses important clinical questions (i.e., whom to treat with a given technology, when to treat, and for how long). Suggested maximum length: 30 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Viewpoint

A viewpoint includes scholarly based opinion(s) on an issue of clinical relevance that currently may be neglected, controversial, or related to future legislation, or could serve to update the readership on current thinking in an area. Suggested maximum length: 10 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Commentary

A commentary is a short, timely article that spotlights current issues of direct interest to the communication sciences and disorders community. Commentary articles are often extensions or reactions to positions put forward in viewpoint articles. Suggested maximum length: 10 pages including citations, tables, and figures (supplemental materials not included in length guidelines).

Letter to the Editor

A letter to the editor communicates opinions about material previously published in the journal or views on topics of current relevance. A letter relating to work published in the journal will ordinarily be referred to the author(s) of the original item for a response, which may be published along with the letter.

Introduction

An introduction is generally a short article presented at the beginning of a forum or special content collection. It may be written by, as applicable, the journal's editor-in-chief, an editor, or the guest editor involved and is intended to provide background information on the topic covered, brief explanations of the articles, and the aims or goals of the forum or special issue. An introduction is typically limited to 10 manuscript pages, including citations, tables, and figures.

Epilogue

An epilogue is a short article at the end of a forum or special content collection that is written by, as applicable, the journal's editor-in-chief, an editor, or the guest editor involved. An epilogue should include a summation of the preceding articles' findings and may draw broader conclusions than the individual articles. An epilogue is typically limited to 10 manuscript pages, including citations, tables, and figures.

Manuscript Preparation

Generally, scientific manuscripts should be organized as follows:

- Title page
- Abstract
- Introduction
- Method
- Results
- Discussion
- Acknowledgments
- Data Availability Statement
- References
- Tables and Figures
- Learning Outcomes
- Appendices (optional)
- Supplemental information (optional)

Because scientific papers are organized in this way, readers know what to expect from each part of the paper and they can quickly locate specific information.

General Manuscript Formatting

All manuscripts submitted to the ASHA Journals should adhere to the following general formatting guidelines:

- Manuscripts must be provided as a standard document format (e.g., .doc, .docx).
- Figures must be provided as a standard image format (e.g., JPEG, TIFF, PNG) and have a resolution of at least 300 DPI.
- Tables must be provided as either an editable Microsoft Word document (i.e., .doc, .docx), or as an editable Microsoft Excel spreadsheet (i.e., .xls, .xlsx) containing only text and no formulas.
- Manuscripts should be double spaced.
- Continuous line numbers must be included (for instructions, visit the [Writing and Formatting Your Manuscript page](#) on the ASHA Journals Academy).
- Single spaces after periods.

Page Limit

A guideline of 40 pages (including title page, abstract, text, acknowledgments, references, appendixes, tables, and figures) is suggested as an upper limit for manuscript length for most manuscript types. This page limit does not include supplemental materials. Please note that this is just a general guideline. Longer manuscripts, particularly for critical reviews and extended data-based reports, will be considered but authors should submit a cover letter providing a rationale explaining why the added length is needed. Additional information is available on the ASHA Journals Academy website.

Title Page

The title should be short and clear, yet provide a sufficient description of the work. As the title becomes the basis for online search results, it should contain the key words describing the work presented. If your title is not precise enough or is too “catchy” versus informative, people may have difficulty finding your article. The title page should also include a list of the authors and their affiliations (see [Authorship Criteria and Guidelines](#) for more information).

Abstract

The abstract helps readers scan through lists of articles or search results and is essential for helping users decide whether to read the rest of the article or save it for future reference. As a result, abstracts must be brief but also informative enough to be genuinely useful.

ASHA recommends that abstracts be 150–250 words. The size limit for what can be included in your submission is set above 300 words, but that is so that very detailed abstracts for specific types of studies can be accommodated (see, for example, the abstract for [this randomized controlled trial](#) reported according to the [CONSORT framework](#)).

For a typical research article, abstracts should be structured using the following sections:

Purpose: The Purpose section must include a concise statement of the specific purposes, questions addressed, and/or hypotheses tested. Lengthy descriptions of rationale are not necessary or desirable.

Method: The Method section must describe characteristics and numbers of participants and provide information related to the design of the study (e.g., pre-post group study of treatment outcomes, randomized controlled trial, multiple baseline across behaviors; ethnographic study with qualitative

analysis; prospective longitudinal study) and data collection methods. If the participants have been assigned randomly to study conditions, this must be noted explicitly, regardless of the design used. If the article is not data-based, information should be provided on the methods used to collect information (e.g., online database search), to summarize previously reported data and to organize the presentation and arguments (e.g., meta-analysis, narrative review).

Results: The Results section should summarize findings as they apply directly to the stated purposes of the article. Statistical outcomes may be summarized, but no statistics other than effect sizes should be provided. This section may be omitted from articles that are not data-based.

Conclusions: The Conclusions section must state specifically the extent to which the stated purposes of the article have been met. Comments on the generalizability of the results (i.e., external validity), needs for further research, and clinical implications often are highly desirable.

Introduction and Body of Paper

Information about the scope and format of the introduction and main body of your paper (methods, results, and discussion sections) is available on the Author Resource Center in the ASHA Journals Academy under [Writing and Formatting Your Manuscript](#).

Acknowledgments

Citation of grant or contract support of research with the applicable grant or contract numbers must be given in an acknowledgments section at the end of the article (before the References). If any part of the research was supported by an institution not named on the title page, that institution should be acknowledged in this section. Individuals who assisted in the research may be acknowledged. Do not name individuals (editors and reviewers) who participated in the review process.

Data Availability Statement

A data availability statement (DAS) detailing where data supporting the results reported in the article can be found, including, where applicable, hyperlinks to publicly archived datasets analyzed or generated during the study, is required. The DAS should be submitted within the article manuscript, before the 'References' section. Data availability statements can also indicate whether data are available on request from the authors and where no data are available, if appropriate. Templates for writing these statements are available in the [Research Data Standards](#) section of the ASHA Journals Academy.

References

All literature cited in the text, as well as test and assessment tools, ANSI and ISO standards, and specialized software, must be listed in this section. References should be listed alphabetically, then chronologically under each author. Journal names should be spelled out and italicized. Pay particular attention to accuracy and APA style for references cited in the text and listed in the references. Provide page numbers for any chapters or journal articles. Include digital object identifier (DOI) information if available.

Tables and Figures

Tables present lists of numbers or text in columns, each column having a title or label. Figures are visual presentations of results, including graphs, diagrams, photos, drawings, schematics, maps, and so on. Each table or

figure should appear on its own page (i.e., do not put more than one figure or table on the same page). Use Arabic numerals to identify both tables and figures, and do not use suffix letters for complex tables. Instead, simplify complex tables by making two or more separate tables. Table titles and figure captions should be concise but explanatory. The reader should not have to refer to the text to decipher the information. Keep in mind the width of a column or page when designing tables and figures. In other words, consider whether legibility will be lost when reductions are made to fit a column or page width. Avoid “special effects” in figures (e.g., three-dimensional bar graphs) because they distort, rather than enhance, the data and distract the reader. Keep in mind that for figures with color, legends or captions should provide enough explanation that the meaning is not lost if the article is printed in black and white by a user of the article. See General Manuscript Formatting section for information on file types for tables and figures.

Additional Materials

Learning Outcomes

Perspectives of the ASHA Special Interest Groups authors should—and other journal authors are encouraged to—include up to 3 learning outcomes in order to help create learning assessments for ASHA Continuing Education Units (CEUs). ASHA Continuing Education provides [guidelines to crafting learning outcomes](#).

Appendices

An appendix allows you to include detailed information that would interrupt the flow of the main body of the article. Examples of items you might have in an appendix include lists of words, a questionnaire or tool used in the study, a detailed description of an apparatus used in the research, and so on. If such material should be openly accessible and not within the overall copyright applied to the article, then you should include it as supplemental material instead (see below).

Supplemental Material

Supplemental material is nonessential to understanding of the paper but may present information that further enhances the article. ASHA has partnered with [Figshare](#) to enable authors to automatically archive data and supporting materials in an open access, public repository when submitting an article to an ASHA journal. Figshare provides unlimited data storage for a wide variety of file formats. Information on acceptable file formats is available on the ASHA Journals Academy in the [Supplemental Material and Multimedia section](#) of the [Writing and Formatting Your Manuscript page](#). You can easily upload supplemental files within the existing [Editorial Manager submission workflow](#).

Supplemental material can consist of any of the following:

- *text* (e.g., tables that are too lengthy for publication within the journal; equations and models; or program source code for presentation of experimental protocols or analysis of data)
- *Images* (e.g., visual stimuli or alternative figures with data plotted on different time scales)
- *video* (e.g., instruction in classroom, or demonstrations of clinical or research protocols)
- *sound clips* (e.g., auditory stimuli)
- *data* (e.g., raw data for testing and evaluating models, or normative data)

Any files for supplemental materials should be submitted at the same time as the manuscript and will be subject to the normal peer review process. Please indicate clearly that the material is intended as supplementary, and be sure that it is referred to within the text of the manuscript. Also, please provide a concise (1- or 2-sentence) description for each file supplied. The material must be original content that has not been previously published. Where possible, the

material will be copyedited. Please note: Recordings or images that involve identifiable participants require permission from those individuals. Please secure and provide that signed consent.

If your article is accepted for publication, then all of your supplemental files are automatically deposited into the ASHA Journals Figshare data repository without charge. Once deposited, all content is assigned a permanent web link (DOI) so you and other authors can link directly to it from future papers. Items housed there will also have usage and Altmetric attention data displayed there, as well as a link back to the article to which they apply.

Figshare is an open access repository using Creative Commons licenses for supplemental material hosted there. CC BY is the license used for most file types. CC0 is the standard license used for sharing data and databases. However, you can select another license to set access restrictions on your supplemental material if needed. Please review the explanation of [Creative Commons licenses](#) for more information.

Research Reporting Standards

ASHA encourages the use of relevant reporting guidelines to help promote the transparency and reproducibility of scientific research. Although the submission of completed checklists for the relevant guidelines (and flow diagram, if applicable) alongside your manuscript is not required, we do encourage you to submit such materials. It is hoped that by utilizing the appropriate reporting guidelines, the quality of research reports will be improved, enabling easier evaluation and better clinical applicability. Authors are encouraged to review the Enhancing the QUALity and Transparency of health Research (EQUATOR) information in the [Reporting Standards section](#) of the ASHA Journals Academy. Editable checklists for reporting guidelines can be found on the [EQUATOR Network site](#), which also gives general information on how to choose the correct guideline and why guidelines are important.

Open Science Badges

All authors publishing in ASHA Journals may apply for Open Science Badges. Open Science Badges were developed by the Center for Open Science to recognize authors who share data or materials and who preregister studies and/or analysis plans. To learn more about the available badges and access the application, visit the [Guidelines for Reporting Your Research](#) section of the ASHA Journals Academy.

Bias and Language

ASHA Journals follow the *Publication Manual of the APA* (7th ed.) style on the use of person-first language, which states authors should be mindful of the importance of using language that is free of bias or the suggestion thereof. Per APA style, “It is unacceptable to use constructions that might imply prejudicial beliefs or perpetuate biased assumptions against persons on the basis of age, disability, gender, participation in research, racial or ethnic identity, sexual orientation, socioeconomic status, or some combination of these or other personal factors (e.g., marital status, immigration status, religion)” (p. 131).

However, when an author expresses a preference for identity-first language, ASHA honors that preference. APA says, “As always, good judgment is required—these are not rigid rules. If your writing reflects respect for your participants and your readers, and if you write with appropriate specificity and precision, you contribute to the goal of accurate, unbiased communication” (p. 131).

Reference Style and Formatting

Following the APA style, include all necessary references and citations in your manuscript before submitting via Editorial Manager. Credit lines for quoted, reprinted, or adapted materials must be inserted on the page where such material appears. In granting permission, the copyright holder may specify the form or the location of the credit line, or both; be sure to follow their requirements completely and include all evidence of obtained permissions when submitting your manuscript.

Research and Publication Ethics

ASHA expects of its members high standards of ethical conduct in all professional activities. In addition to the ASHA Code of Ethics, ASHA has issued practice policy documents to clarify ethical issues related to research and scholarly activities. Authors, particularly those who are ASHA members, are encouraged to review these documents and apply them to their research and scholarly endeavors. In addition, the following policies and their associated resources apply to the publication of research in ASHA journals.

Protection of Humans and Animals in Research

All research to be submitted for publication in ASHA journals in which humans or animals are used must adhere to the basic ethical considerations for the protection of research subjects. ASHA requires every research article submitted to include a statement that the study obtained ethics approval (or a statement that it was not required), including the name of the ethics committee(s) or institutional review board(s), the number/ID of the approval(s), and a statement that participants gave informed consent before taking part.

When reporting research involving data from human subjects, the author should ensure that the work described has been carried out in accordance with The World Medical Association's Declaration of Helsinki for experiments involving humans. The privacy rights of human subjects must always be observed. Nonessential identifying details should be omitted. If there is any doubt that anonymity can be maintained, then informed consent should be obtained in writing before manuscript submission.

All animal experiments should comply with the [ARRIVE guidelines](#) and should be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986, and associated guidelines, EU Directive 2010/63/EU for animals used for scientific purposes, or the [National Institutes of Health Guide for the Care and Use of Laboratory Animals](#). The authors should clearly indicate in the manuscript that such guidelines have been followed.

Conflicts of Interest

As part of the manuscript submission process, authors are required to disclose any real or potential conflicts of interest that could be seen as having an influence on the research (e.g., financial interests in a test or procedure, or funding by an equipment or materials manufacturer for efficacy research).

Sources of outside support for research, including funding, equipment, and supplies, must be named during the submission process (and questions to that effect will be presented online to authors as part of the manuscript submission process). In addition, authors must disclose any financial or other nonprofessional benefit(s) that might result from the publication of the manuscript and that reviewers or readers might consider to have affected the conduct or reporting of the work. If the author is uncertain about what might be considered a conflict of interest, he or she should err on the side of full disclosure by reporting the potential conflict when requested to do so during

submission. Additional information is available on the ASHA Journals Academy in the [Authorship and Publication Ethics section](#).

Copyright and Permissions

During submission of a manuscript, the author will be required to affirm that

- No material in the manuscript is the copyrighted work of another individual or organization. *OR*
- Any material that is the copyrighted work, or an adaptation of such work, of another individual or organization is clearly marked as such and that the author has obtained permission for its use in the manuscript in all forms (i.e., both print and electronic) and languages.

Seek written permission for publication by the American Speech-Language-Hearing Association (ASHA) in all forms (i.e., both print and electronic) and all languages, every time you use or adapt any text or images that are not your (or a co-author's) original work. Also, keep in mind that for materials that are your original work, your previous publication of them might mean that a publisher is the copyright holder. In such a case, you must verify the copyright holder's terms and conditions relating to your reuse, adaptation, or republication. Permission for using ASHA materials such as content from the ASHA journals, the ASHA website, or content from other publishers can often be obtained directly from the [Copyright Clearance Center](#).

Authors are responsible for paying any fees requested from copyright holders to grant the reprint or adaptation.

When to Seek Permission

Always seek permission from the copyright holder, who is usually the publisher and not the author, if

- you copied and pasted (or otherwise reproduced) text or images from anywhere online into your manuscript.
- you copied and pasted (or otherwise reproduced) text or images from a computer software program/app into your manuscript.
- you started with text or images from someone else's work (published or not) and modified it into something new for your manuscript.
- you intend to use text or images from someone else's work (published or not) in a test or tool you created yourself and plan to publish test items from and/or earn money from sale of the test/tool.
- your image includes someone's face. (If the person in the picture is a minor, the parent or guardian's written consent must be obtained.)

These guidelines are especially true for material that is part of an assessment/diagnostic instrument. Never include actual test items in your manuscript unless you have received explicit permission from the publisher to do so.

Use of Public Domain Materials

Please note that online searches for public domain content are not necessarily reliable. You must do your due diligence to ascertain that the material you intend to use is actually in the public domain. In the absence of clear

notation to that effect on the material (either via a caption or license), consider such material not to be in the public domain. If you have read through a license that you believe grants your use of the content without a formal request, upload a copy of that license during submission of your manuscript files. If you paid an artist to create images, upload a copy of the signed agreement for use from the artist.

Artificial Intelligence

ASHA journals require that text based – either in whole or in part – on output produced by generative artificial intelligence (AI), large language models (LLM), or similar technologies and included in a manuscript must be declared by the authors. ASHA journals prohibit the inclusion of AI-generated images or video. Additionally, ASHA journals prohibit the crediting of AI, LLM, or similar technologies as authors.

Please note, the above stipulations do not apply to permissible use of AI nor do they alter similar ASHA journals policy relating to AI and potential scientific misconduct (e.g., image manipulation, etc.). Please refer to [Artificial Intelligence](#) under Authorship and Publication Ethics on the ASHA Journals Academy for additional guidance and sample declaration statements.

Manuscript Submission

ASHA journals use Editorial Manager to manage the submission and peer review process. Authors can log into *Perspectives'* Editorial Manager website at <https://www.editorialmanager.com/perspectives>.

If your paper was invited, then you will see it under “Invited Manuscripts” when you arrive at your Author Dashboard. Select this entry and complete your manuscript details there. . Otherwise, click “Start New Submission” in your Author Dashboard queue. Once logged in, the system provides step-by-step instructions to guide authors through the submission process. If you experience any problems during submission, please contact the Editorial Administrator at perspectives@asha.org.

Materials You Will Need

When ready to submit a manuscript, you will need to gather the following:

- The manuscript file
- Figure files
- Any applicable supplemental material files
- Information about any conflicts of interest
- Any applicable permissions files
- Continuing Education (CE) Questions

For a more comprehensive introduction and overview of the manuscript submission process, visit the [Manuscript Submission](#) section of the Author Resource Center in the ASHA Journals Academy.

Copyright & Open Access

During the manuscript submission process, you will be prompted to sign an electronic copyright transfer form that gives ASHA copyright of the final, published work. While ASHA journals needs publishing rights in order to publish and disseminate research articles, ASHA supports authors’ choice on how to publish their work. We are committed

to helping you comply with your funder and institutional requirements and support both green and gold open access options. Also, any author publishing in an ASHA journal can opt to retain their copyright and sign a license to publish using the author-pays open access option. Additional information about [this and other options](#) are available in the [Manuscript Submission](#) section of the ASHA Journals Academy.

Furthermore, ASHA recognizes the importance of authors' use of their work in furthering scholarship and research. Although a copyright transfer is signed by authors at submission, authors should be aware that they retain many rights for noncommercial use of the material. Express permission for use is required only in circumstances stipulated on the copyright transfer form. Information regarding [Sharing and Using Your Research](#) is available on the ASHA Journals Academy.

Authorship Overview

Authors are expected to consider carefully the list and order of authors before submitting their manuscript and provide the definitive list of authors at the time of the original submission. Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. For more information on authorship criteria, see the International Committee of Medical Journal Editors' (ICMJE) resource, "[Defining The Role of Authors and Contributors](#)."

Corresponding Author

The corresponding author is the one individual who takes primary responsibility for communication with the journal during the manuscript submission, peer review, and publication process, and typically ensures that all the journal's administrative requirements, such as providing details of authorship and ensuring that any necessary disclosures (e.g., conflict of interest) are properly made, although these duties may be delegated to one or more coauthors. The corresponding author should be available throughout the submission and peer review process to respond to editorial queries in a timely way, and should be available after publication to respond to critiques of the work and cooperate with any requests from the journal for data or additional information should questions about the paper arise after publication. Although the corresponding author has primary responsibility for correspondence with the journal, ASHA recommends that editors send copies of all correspondence to all listed authors.

Changes to Authorship

Any addition, deletion, or rearrangement of author names in the authorship list should be made only before the manuscript has been accepted and only if approved by the journal editor. To request such a change, the editor must receive the following from the corresponding author: (a) the reason for the change in author list and (b) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal, or rearrangement. In the case of addition or removal of authors, this includes confirmation from the author being added or removed.

Only in exceptional circumstances will the editor consider the addition, deletion, or rearrangement of authors after the manuscript has been accepted. While the editor considers the request, publication of the manuscript will be suspended. If the manuscript has already been published in an online issue, any requests approved by the editor will be made via an erratum.

Peer Review Process

Manuscripts submitted to the ASHA journals go through an editorial board peer review model. Assuming two rounds of review (one round for the original submission and one round for the revised manuscript), time from submission to

final decision in the editorial board peer review model can take as little as approximately 4 months. But again, the overall time from submission to final decision of a manuscript depends largely on the number of rounds of review and how long authors take to complete revisions. Authors following submission instructions and submitting revisions that thoroughly address review comments help peer review maintain a swift pace.

Original Submission Review

Using the ASHA Journals Editorial Manager system, you will upload a properly formatted manuscript, select a SIG, and answer a series of disclosure questions (see our guide on [Manuscript Submission](#) for more information). The manuscript will then be assigned to the appropriate SIG editor. The editor will typically then assign the manuscript to at least two editorial board members (EBMs) or ad hoc reviewers, or some combination thereof, for reviews. The EBMs or ad hoc reviewers submit comments using a structured peer review template, along with a decision recommendation, to the editor. The editor then reads the reviews in depth, considers the recommendations, and renders a decision. An editor would be free to recruit additional reviews, such as for specialized statistics review, as needed.

Author Revision and Submission

If your manuscript requires a revision, as is most typically the case, then you will be given up to 6 weeks to revise and resubmit the manuscript.

Revised Submission Review

After receiving your revised manuscript, the editor will typically then assign at least two EBMs or ad hoc reviewers (typically those who participated in the initial review), or some combination thereof, to review the revised version of the manuscript. The reviewers will submit comments and recommendations, and then the editor will render a revision decision.

Second Author Revision and Submission

If your manuscript requires a second revision for acceptance, you will be given up to 3 weeks to submit a revised manuscript.

If Rejected

There are a number of reasons a manuscript may be rejected for publication in *Perspectives*. They can range from the manuscript not being a good fit for *Perspectives*, to concerns over the overall quality.

Authors may disagree with the decision of the editors of *Perspectives* and may wish to challenge and appeal those decisions.

All appeals concerning decisions of an editor are first directed to the editor. In many cases, author-editor disagreements can be resolved directly through discussions between these parties. If no resolution is achieved, the author may file an appeal with the chair of the Journals Board. For details, visit the [What to Expect in Peer Review](#) page of the ASHA Journals Academy.

If Accepted

If your article is accepted, it will begin the journal production process. During the production process, you will be asked to provide some answers to author queries and make some basic revisions, but most of the process will be handled by the ASHA Journals production staff at this point.

Production Process and Timeline

After your article has gone through peer review and been accepted, it will enter the production phase of the publication process. In the production phase, your original manuscript is styled, copyedited, professionally typeset, and then proofread. The vast majority of the production steps go on behind the scenes, and you typically will not need to be involved in these initial steps. After all these steps are complete, you will receive page proofs of your article, along with a list of questions that have come up over the course of the production process. The best way to provide revisions is by annotating the PDF of the article that you were sent by the production team. We have [a useful guide](#) to help you with just that.

After you've uploaded your revisions, the ASHA Journals production team will apply your edits and have the final version of the article typeset. The ASHA Journals team will contact you if they have further questions during this phase. Once revisions are complete, the manuscript is ready for publication.

Overall, the production process for your article should take about 6 weeks. Please note, these times are ideal and are not always possible. Complications such as the volume of manuscripts or the nature of corrections may require additional time. You can help keep the production process on track by returning your proofs on time, and by being mindful of things such as copyright issues within your article.

Maximizing Visibility, Use, and Impact

Getting published is just the beginning! ASHA is working with a free service called [GrowKudos](#) to help our authors maximize the impact of their published work. Once your article is published, you will receive an email inviting you to register with Kudos to claim, explain, and share your existing publications. There is no charge for authors to register and it only takes a few minutes of your time. To help ASHA authors publicize their research to colleagues and funders, all authors—corresponding authors as well as contributing authors—are encouraged to participate in Kudos.

In addition to helping open up your research to new audiences, once you've "claimed" a publication (i.e., confirmed that you are the author of a particular article), Kudos enables you to monitor article usage and view its available metrics. The Kudos "basket of metrics" includes citations, downloads and Altmetrics (tracking discussion of your work in a range of places including press coverage, social media and government policy). With Kudos you can track the most effective networks for getting your work read, discussed, and cited to improve the metrics by which your reach is evaluated.

Learn more about how you can use and share the research you publish in the ASHA Journals on the [Maximizing Impact page](#) of the ASHA Journals Academy.
